

"Assistive Technology Detectives!"

Objective:

Students will learn about different types of assistive technology and how these tools help people with disabilities live, learn, and play.

Activity 1:

Materials Needed:

- "Assistive Technology Detective" worksheet made up of picture or printed examples of assistive devices (e.g., wheelchair, hearing aid, Braille book, communication tablet, prosthetic limb, service dog gear)
- Scissors and glue (optional, if using a cut-and-paste version)
- Markers or crayons

Instructions:

1. Detective Briefing (Introduction, 5-7 minutes):

Explain that assistive technology is anything that helps people with disabilities do things they want or need to do. It can be high-tech like a talking computer, or low-tech like a pencil grip!

Examples you can mention:

- Wheelchairs help people move.
- Hearing aids help people hear sounds.
- Braille books help people who are blind read with their fingers.
- Communication boards help people who have trouble speaking
- Cell phones have accessibility settings to help people with different disabilities.

2. Detective Mission (Main Activity, 10 minutes):

Hand out the worksheets. Students must match or sort different assistive technologies to what they help with (mobility, hearing, vision, communication, daily living).

Information, materials, and/or technical assistance are intended solely as informal guidance, and are neither a determination of your legal rights or responsibilities under the ADA, nor binding on any agency with enforcement responsibility under the ADA. The Northeast ADA Center is authorized by the National Institute on Disability, Independent Living, and Rehabilitation Research (NIDILRR) to provide information, materials, and technical assistance to individuals and entities that are covered by the ADA. The contents of this presentation were developed under a grant from NIDILRR, grant number 90DPAD0003. NIDILRR is a Center within the Administration for Community Living (ACL), Department of Health and Human Services (HHS). The contents of this presentation do not necessarily represent the policy of NIDILRR, ACL, HHS, and you should not assume endorsement by the Federal Government.

For example:

- Wheelchair → Mobility
- Hearing Aid → Hearing
- Braille Book → Vision
- Speech Device → Communication

(You can make this a simple matching line activity or cut-and-paste sorting task depending on the students' ages and abilities.)

3. Creative Challenge (Optional Extension, 10 minutes):

Ask students to draw their own "new invention" to help someone with a disability. What would it look like? What would it do? Encourage creative thinking!

Discussion Questions to Wrap Up:

- What assistive technology did you find most interesting?
- How do these tools make life better for people?
- Why is it important to make sure everyone can do the things they want to do?

Activity 2:

Materials Needed:

Phone or tablet

Instructions:

 Go to the settings section and find accessibility features and show kids the different options of things that can be adjusted such as zoom, display and text size, audio descriptions, etc.
